

PLASTIC COATED BEARING

Plastic coated bearing means wrap one layer plastic material outside of the bearing. The plastic material is normally PA, POM or PP. It has certain hardness, impact resistance, wear resistance and self-lubricating function. Widely used for sliding window, furniture, mechanical machines and machinery accessories etc.

Plastic coated bearing can made into different shapes, such as V type.

Model	I.D.(mm)	O.D.(mm)	Width(mm)	Internal Bearing	U Groove Size	Plastic Material
